1. Introduction

Team Members	Tasks
Noorul Amaanie Yoosuf	Student I
Dankoluwage Minoshi Dulanji	Student II
Rusini Thara Gunarathne	Student III
Mohammed Amjad Rafi	Student IV

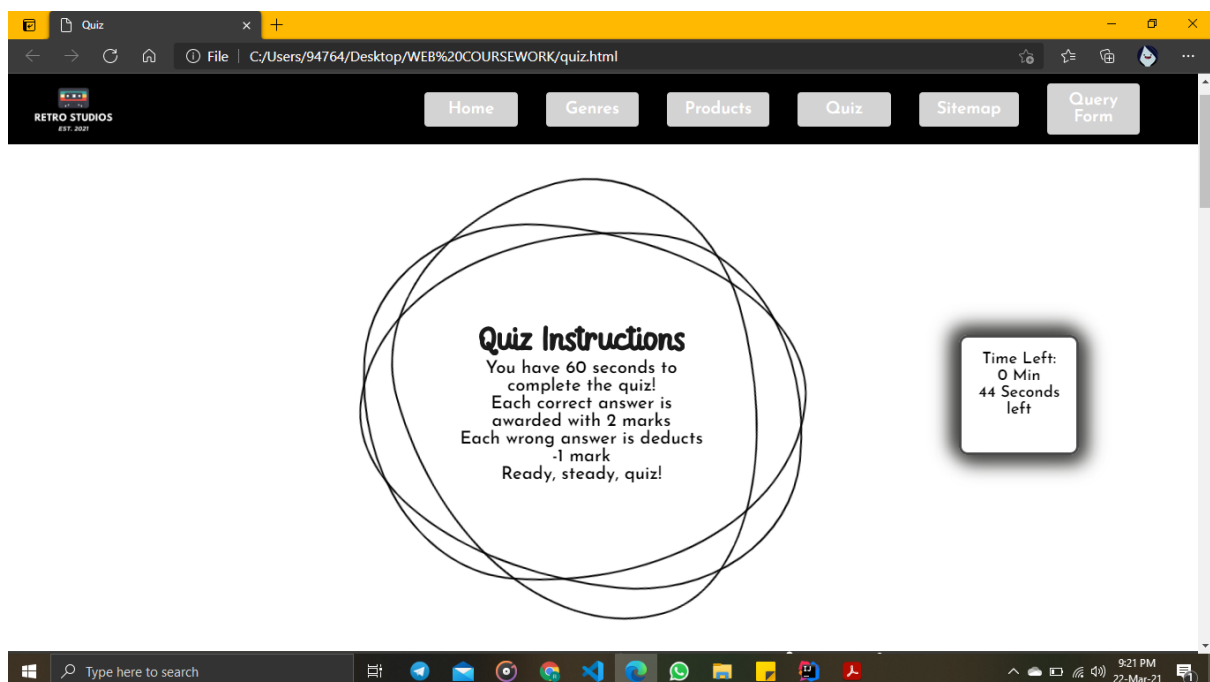

The topic of our website is music and the title we chose was Retro Studios.

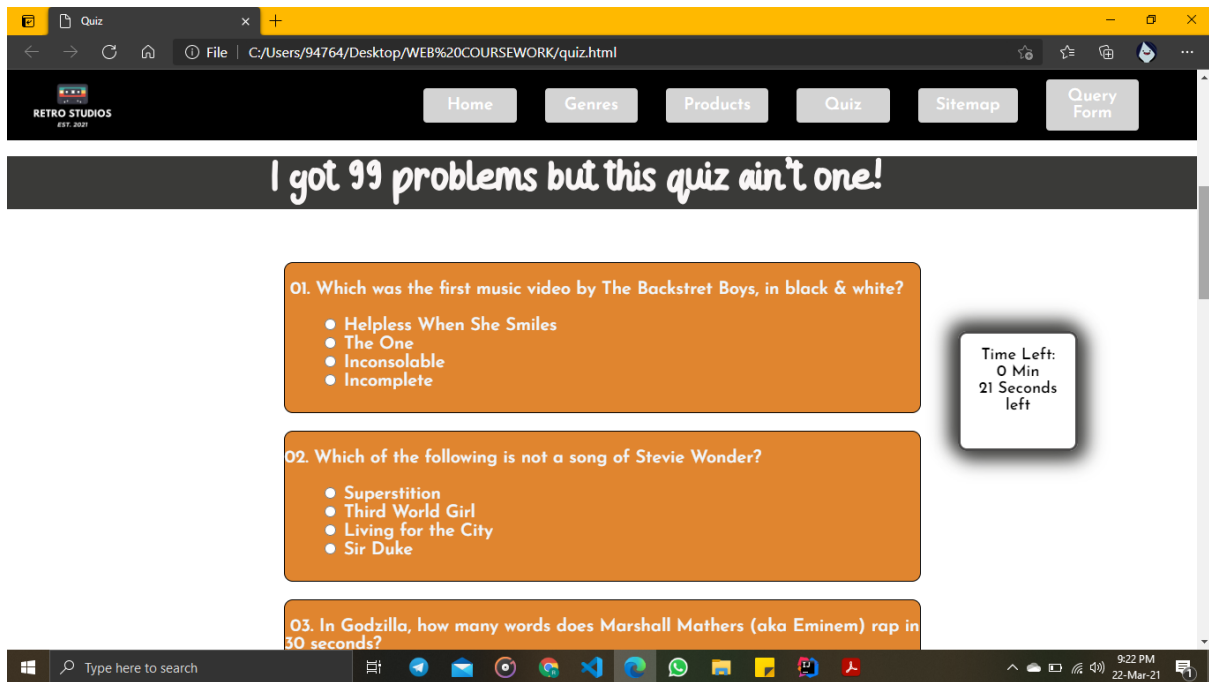

2. Technical Discussion

Quiz

The goal of this was to get an interactive multiple-choice quiz done about the subject of music with certain limitations. At first, when the user gets directed to the quiz page it is going to load a confirm box with two options namely as Cancel and OK.

When the user clicks OK the quiz with a total of 10 questions will be loaded into the page along with the instructions and a timer counting down from 60 seconds.

Used JavaScript to get the quiz displayed by giving the confirming button a Boolean value of true and if the user clicks it, the if condition becomes true and the function for displaying the quiz will get called.

```

1  var con =confirm("LET'S GET GROOVY!") //a confirm box will appear as the first thing
2  if (con==true){
3      displayQuiz();//if user clicks 'OK', the quiz will load
4  }
5
6  //display the quiz
7  function displayQuiz(){
8      var x = document.getElementById("Container1");
9      console.log(x.style.display)
10     x.style.display = "block"; //display the quiz
11     console.log(x.style.display)
12     document.getElementById("timer").style.display="block";
13
14     time = setInterval(myTimer, 1000); //call function of timer with milliseconds
15 }

```

The timer will stay fixed around the right corner of the web page when scrolling the page.

When the user scrolls from the top of the quiz page a button will appear around the right corner from the fifth question onwards to the footer which is linked to the header image of the quiz using anchors. Clicking this button, the user will be directed to the first question of the quiz.

The `addEventListener()` method from the document object model was used to add a scroll event listener.

```

184
185 // function for scroll
186 window.addEventListener("scroll",scrollfun); //using DOM
187
188 function scrollfun(){
189     let backtotop = this.document.getElementById("top_scroll")
190     if (document.documentElement.scrollTop > 1200) {
191         backtotop.style.display = "block";
192     } else {
193         backtotop.style.display = "none";
194     }
195 }
196

```

After the user submits the quiz clicking the submit button the timer will freeze and the div with the id showAnswer will get loaded into the page and it will display how you have attempted each question.

As per request, used radio buttons for the multiple choices with the pre-defined JavaScript function getRadioValue(). The code snippet below is used to check whether if any of the radio buttons are selected and returns their value and if none of the radio buttons are selected the score is null and a value of 0 is given in such cases to ensure that no minus marks are given.

```

53 // get each answer score for each question
54 function getRadioValue (qName) {
55     var radioArray = document.getElementsByName(qName);
56     for (var j = 0, length = radioArray.length; j < length; j++) {
57         if (radioArray[j].checked) {
58             // answer is saved with the checked value
59             var answerValue = Number(radioArray[j].value);
60         }
61         radioArray[j].disabled = true;
62     }
63     // if nothing is selected its null so we give it a value of 0
64     if (isNaN(answerValue)) {
65         answerValue = -1;
66     }
67     return answerValue;
68 }
69
70
71 // calculate score with getRadioValue function
72 let qname=["q1","q2","q3","q4","q5","q6","q7","q8","q9","q10"]
73 var calcScore
74 for(var i=0; i<10; i++){
75     calcScore=getRadioValue(qname[i])//returns the answer value
76     console.log(calcScore)
77     //the calling of getRadioValue function and it will assign a value for calcScore
78     score=calcScore+score
79 }

```

The results of each question are shown inside separate divs. And the marks out of 20 in the fraction form are displayed at the end as a summary along with two buttons to play again and show the answers. Each div will be in Scarlet Orange if the user got it wrong displaying the correct answer, and will be in Corn Orange if it's correct.

In line 43 of the code snippet below, by window.location object it sets the new location of the current window which is a div, and lines 42 and 44 ensures that only the showAnswer div is loaded and not the div with id Container1.

```

35
36 //quiz submission
37 function submitQuiz() {
38     var score = 0
39     //if submitted the time should freeze
40     clearInterval(time);
41
42     document.getElementById("showAnswer").style.display="block"
43     window.location = '#showAnswer';
44     document.getElementById("Container1").style.display = "none";
45
46
47 //display the answer
48 document.getElementById("show").addEventListener("click",function(){
49     document.getElementById("Container1").style.display = "block";
50     document.getElementById("submitButton").style.display = "none";
51 });
52

```

If the score is greater than 10 the background color of the showAnswer div container will be Bahia and if false where the score is less than 10 the background color will be East Bay. At the end of the page, two responsive buttons namely Play Again and Show Answer will be available.

The Play Again button when clicked reloads or refreshes the page for the user to try again. The Show Answer button when clicked will make the back-to-question1 button appear along with the selected answers for the questions before submission and clicking that the user can reach the top

Another div will summarize the users' attempts with a score given out of 20 since each correct question is awarded 2 marks and each wrong answer deducts a mark from the total points gotten from the correct answers.

Every correct answer to each question holds two marks and every wrong answer holds a minus mark.

For instance, if the user gets half correct and half wrong the final score will be only 5 since the addition of minus marks gets deducted from the addition of the marks of correct questions.

The score of the user is shown as a fraction out of the maximum mark which is 20.

If the score is less than 0 which is a minus mark the value of this score will get overwritten to 0.

```

164
165 // show the marks as a fraction
166 if (score < 0){
167     score = 0;
168 }
169 var showScore = "Your Score: " + score + "/" + maxMarks + " & you have completed the quiz in " + (59 - Math.floor(seconds)) + " seconds.";
170
171 //if all correct answers it will display this
172 if (score === maxMarks) {
173     showScore = showScore + "&nbsp; <strong> GREAT, You're a hardcore music enthusiast!</strong>";
174 }
175 document.getElementById('userScore').innerHTML = showScore;
176
177 //the background color of the showAnswer div will change according to the score
178 if (score > 10){
179     document.getElementById("showAnswer").style.backgroundColor="rgba(138,214,34,0.9)"
180 }else{
181     document.getElementById("showAnswer").style.backgroundColor="rgba(76, 81, 109,0.9)"
182 }
183

```

If the quiz is not completed within the period of 60 seconds a confirm box with only the option of OK will pop up at the top of the page displaying that the time is up and the page will freeze. After the user clicks the OK in the alert box the page will automatically submit what you have completed in the quiz. And the summary will be shown as explained before.

Student Details

The student details page is designed in a way that the four members are fitted into a row. Whenever the user hovers over any image the details of the respective member are displayed on the card. The JavaScript function below ensures that only when the user hovers over an image the details are displayed.

```
125 <script>
126
127 //function to enable the details are only displayed when hovered over the image
128 onload = () => {
129   document.querySelectorAll('.imgBx img').forEach(img => {
130     img.onmouseover = overImg; //sets custom class on parent node
131     img.onmouseout = outImg; // removes custom class from parent node
132   })
133
134   //when hovered over the image
135   function overImg() {
136     this.parentNode.classList.add('over');
137   }
138   function outImg() {
139     this.parentNode.classList.remove('over');
140   }
141 };
142
143 // function for scroll
144 window.addEventListener("scroll",scrollfun); //using DOM
145
146 function scrollfun(){
147   let backtotop = this.document.getElementById("top_scroll")
148   if (document.documentElement.scrollTop > 200) {
149     backtotop.style.display = "block";
150   }else {
151     backtotop.style.display = "none";
152   }
153 }
154
155 </script>
```

The `querySelectorAll()` method selects all the elements with the class `imgBx` and accesses the images.

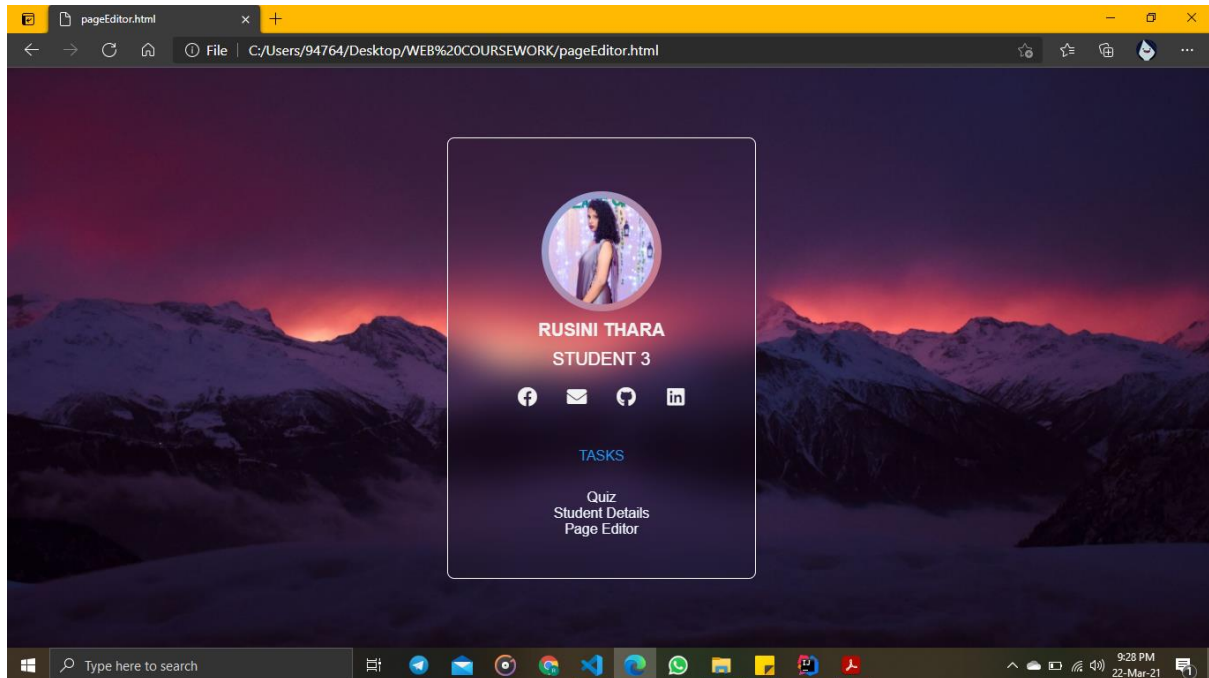

In lines 130 and 131, we define `onmouseover` and `onmouseout` to images to set/remove the custom class on the parent node which is the easiest fix to make work the expected behavior.

And lastly, the back-to-top button is set to appear when the user scrolls down the webpage using the function `scrollfun()`.

A back-to-top button will appear when the user scrolls down and when clicked it will be directed to the top of the page.

Page Editor

The profile card was designed following the concept of Glassmorphism which blurs the area behind the container.

For extra responsiveness added social media icons linking the font-awesome icon set. A row of four icons will be displayed right after the student role and when each icon is clicked the user will get directed to the account of the student of the respective social media platform.

The header for tasks was styled using the transition property and the hovering effect available in CSS.

Once the page editor is loaded a centered profile card will be displayed on the page which contains the image, name, role, and the set of tasks completed by the student. Around the image, there will be an animated border with two colors this was accomplished using CSS @keyframes rule.

```
56
57 @keyframes animated-gradient{ /*changes style of animation in percentages*/
58     25%{
59         background-position: left bottom;
60     }
61     50%{
62         background-position: right bottom;
63     }
64     75%{
65         background-position: right top;
66     }
67     100%{
68         background-position: left top;
69     }
70 }
```

Appendix C: Individual Statement

Student Name:	Rusini Thara Gunarathne	Student Id:	18099940
State what tasks you carried out in the project.			
<ul style="list-style-type: none"> • Quiz • Student Details • Page Editor 			
State what you enjoyed and did not enjoy about teamwork.			
<ul style="list-style-type: none"> • I enjoyed the true team spirit and am satisfied with the contribution of each member in making this project successful. • Everyone was really helpful and worked hard in achieving the end goal of the project. 			
State what you learned about teamwork.			
<ul style="list-style-type: none"> • With teamwork, everything can be done much faster and the creative ideas of team members can make the tasks much more flexible. • Different perspectives of each problem can have different solutions which help to share the knowledge among members. 			
State what skills you gained/learned from undertaking the project.			
<ul style="list-style-type: none"> • Skills in front end web development • Resourcefulness • Creativity • Social skills when it comes to working with team members 			
State any strengths about yourself that emerged whilst undertaking the project.			
<ul style="list-style-type: none"> • The urge to complete the project and give your maximum in making the project successful. • Creativity • Focus • Dedication • Worked on time and had to plan which made me schedule everything related to the project. 			
State any weaknesses about yourself that emerged whilst undertaking the project.			
<ul style="list-style-type: none"> • Gaps in knowledge in mainly JavaScript. 			
State how you would do things better if you were to undertake the project again.			
<ul style="list-style-type: none"> • I would learn much deeper about JavaScript so that it'll make the web page much more interactive and responsive along with this the wasted time on trial and error methods could be reduced as well. 			

Additional general or project-specific comments:

- The project was really good, got the chance to learn much more about front-end-web development and team spirit.
